The important structures of the hand

bones and joints
ligaments and tendons
muscles
nerves
blood vessels

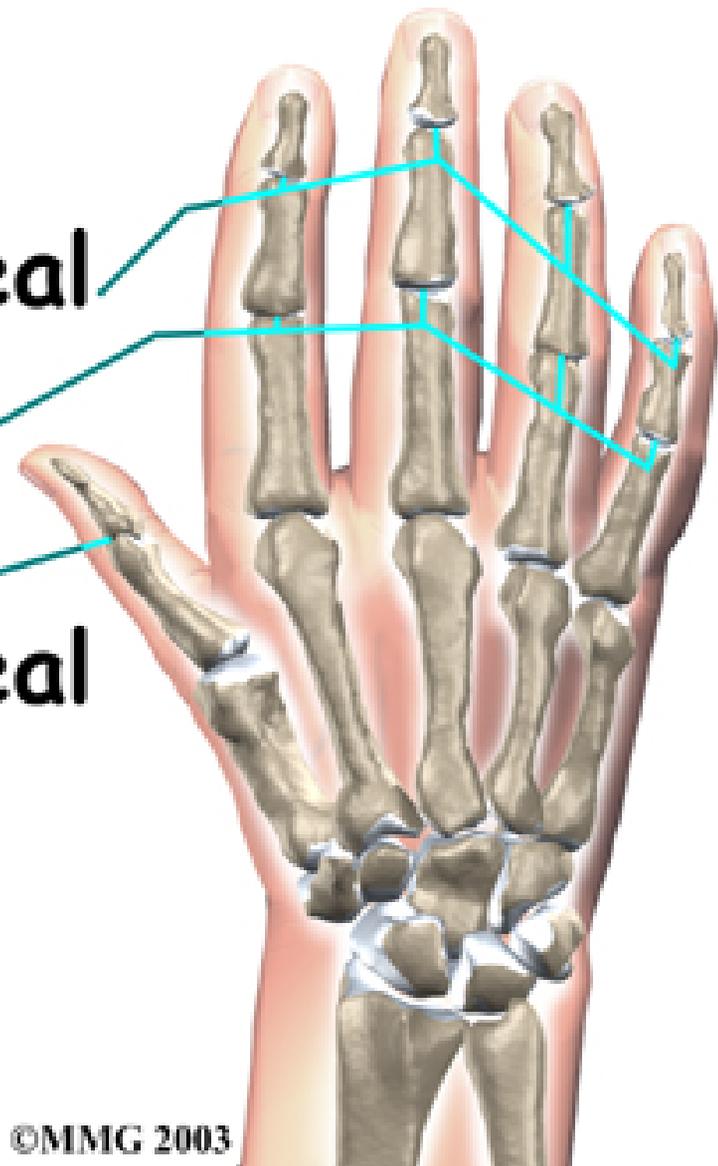

Anterior (Palm up) view of the right wrist **Figure 2.**

IP Joints

Distal
interphalangeal
joints

Proximal
interphalangeal
joints

**Distal
inter-
phalangeal
joint**

**Distal
phalanx**

**Proximal
inter-
phalangeal
joint**

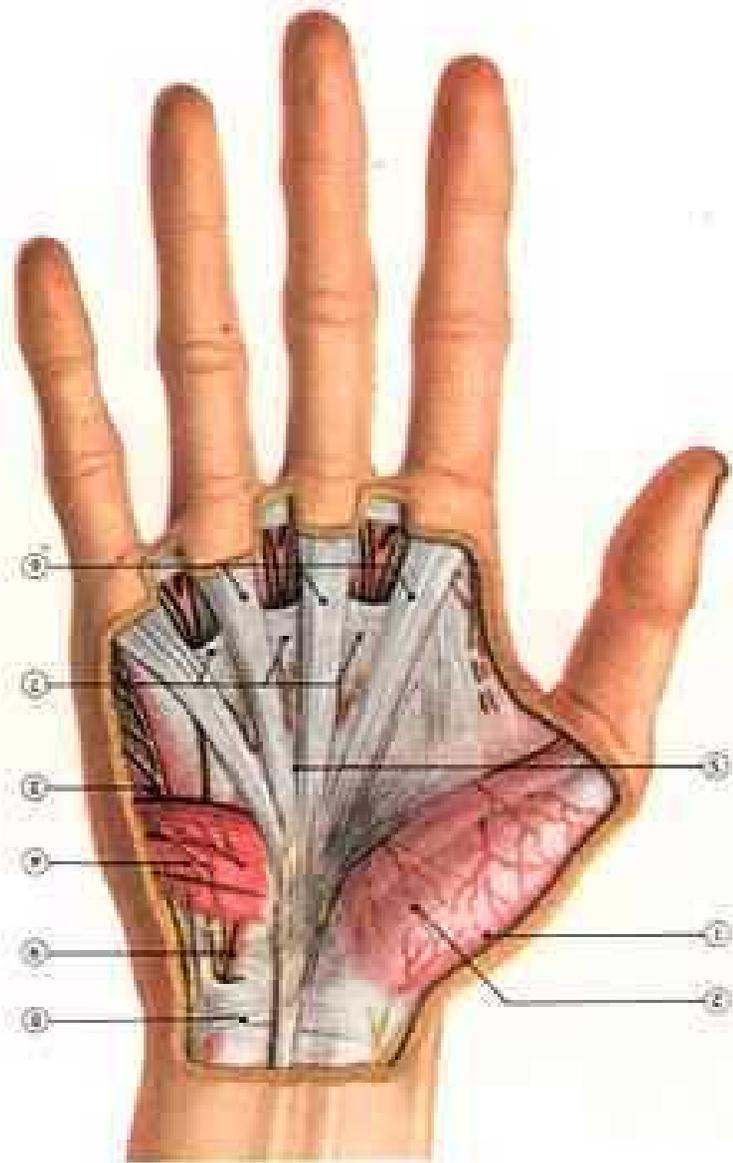

**Middle
phalanx**

**Proximal
phalanx**

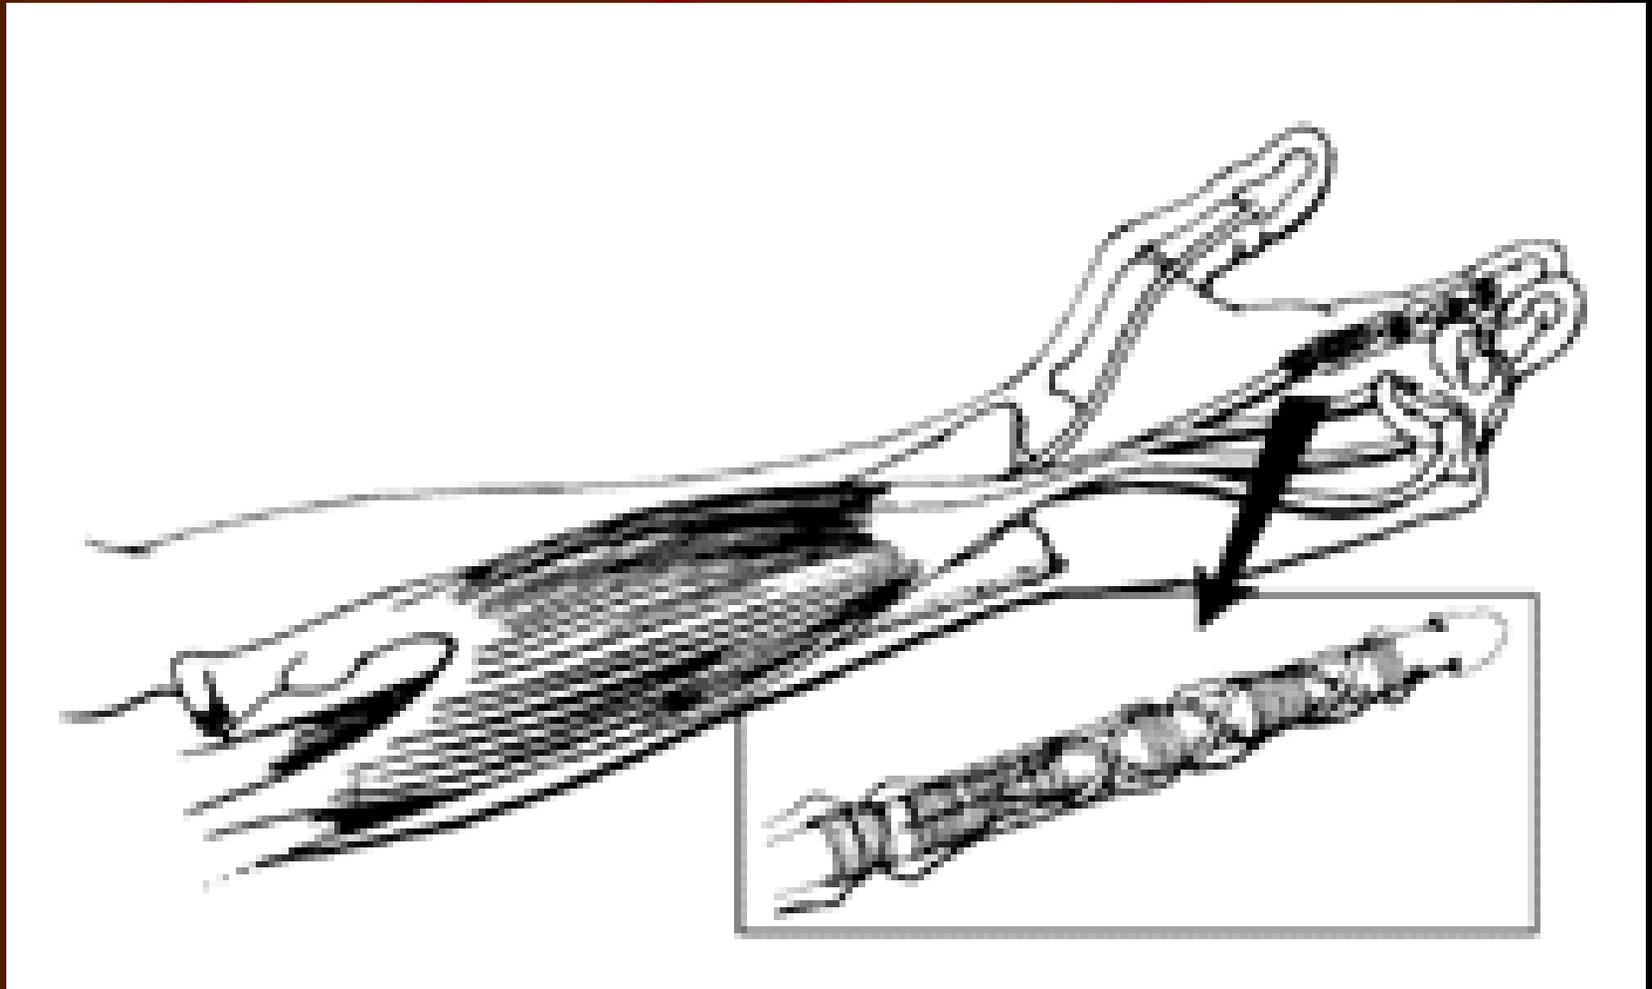

Ligaments

- *collateral ligaments*
 - side of each finger and thumb joint.
 - The function of the collateral ligaments is to prevent abnormal sideways bending of each joint.
- *volar plate*
 - connects the proximal phalanx to the middle phalanx on the palm side of the joint.
 - straightened and keeps the PIP joint from bending back too far (hyperextending).

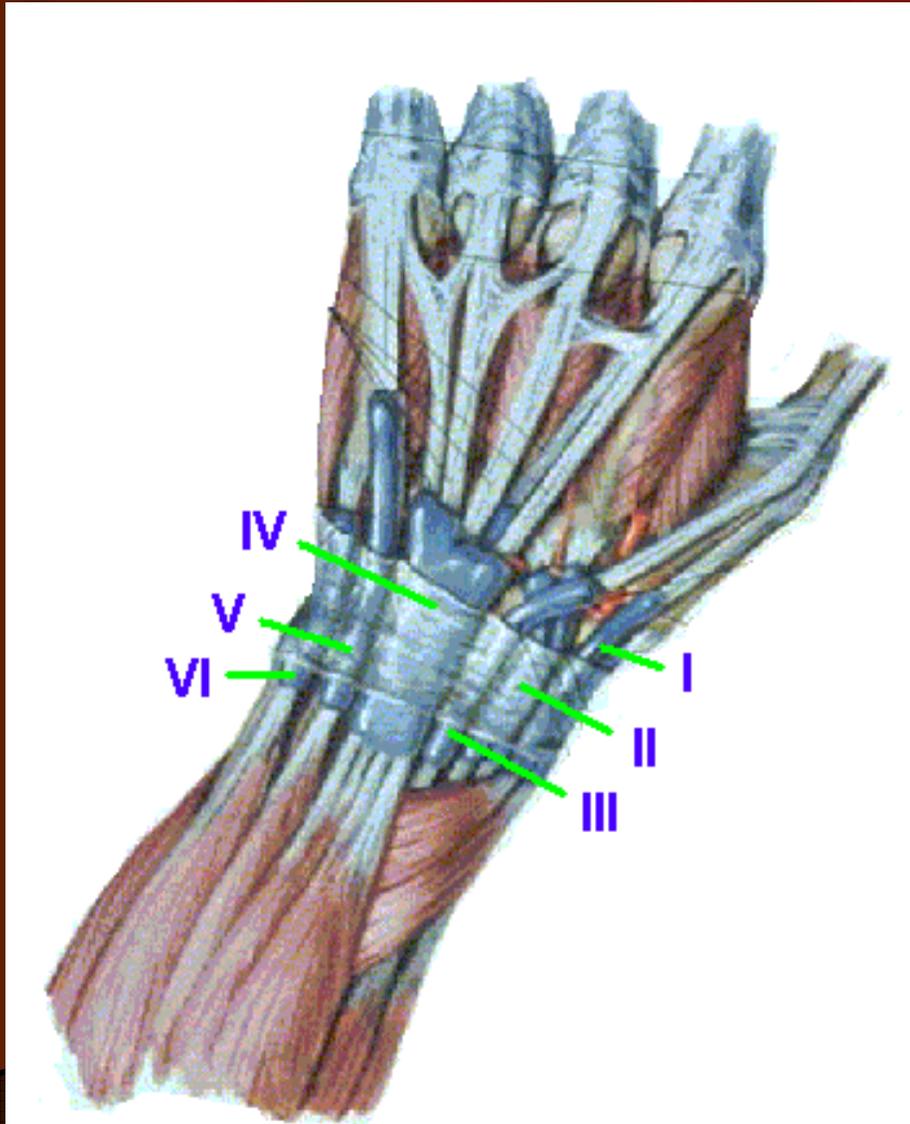

Flexor Tendon

The tendons of the hand extend from the flexor

The dorsal tendon compartments

I. abductor pollicis longus and extensor pollicis brevis

II. extensor carpi radialis longus and brevis

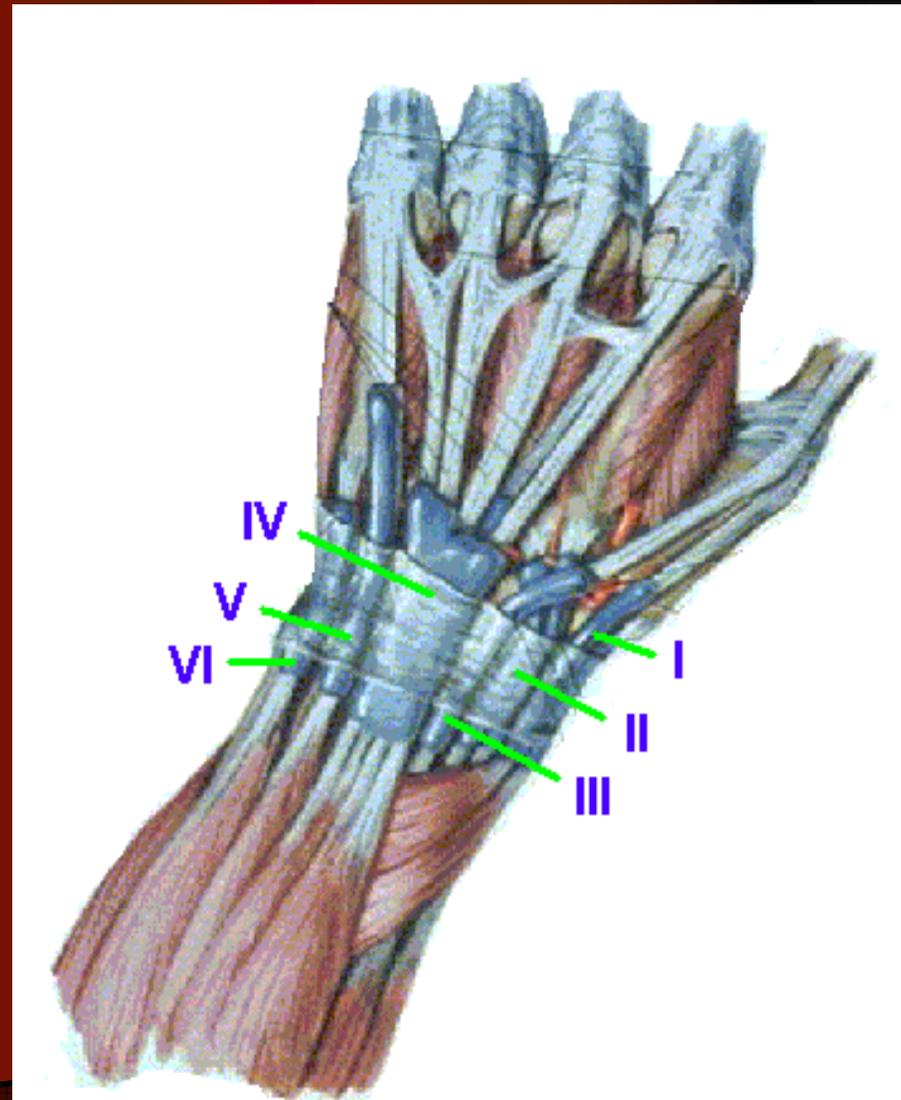

III. extensor pollicis longus

The dorsal tendon compartments

IV. extensor digitorum comunis (four tendons) and extensor indicis

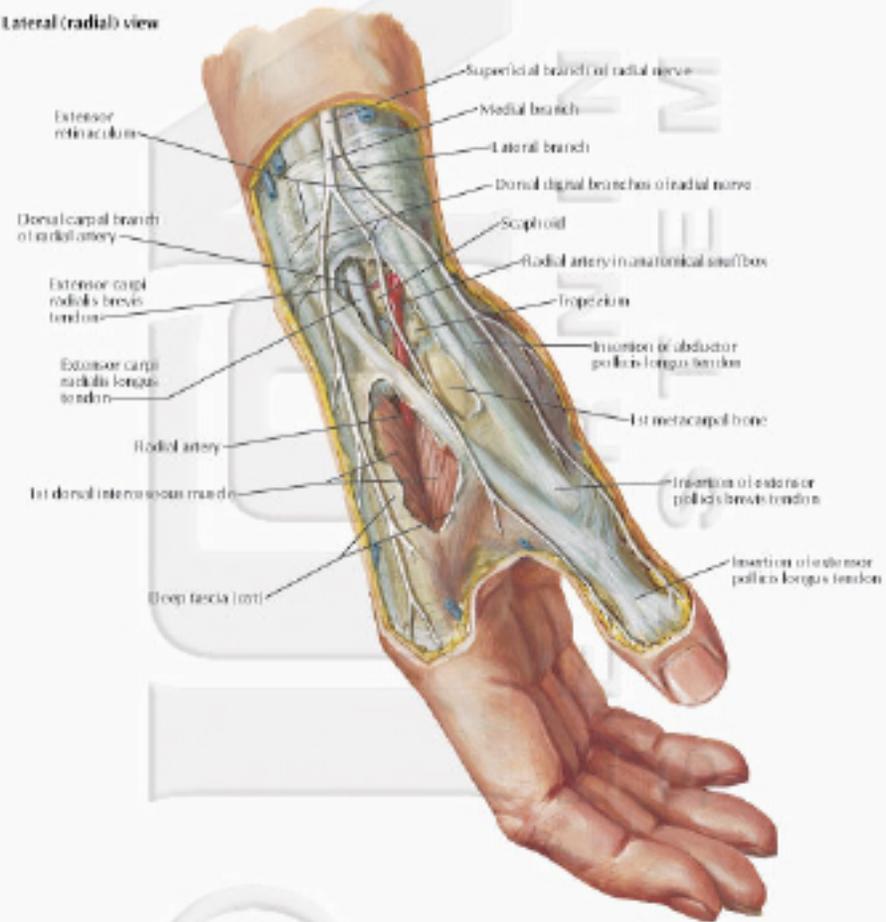

V. extensor digiti minimi

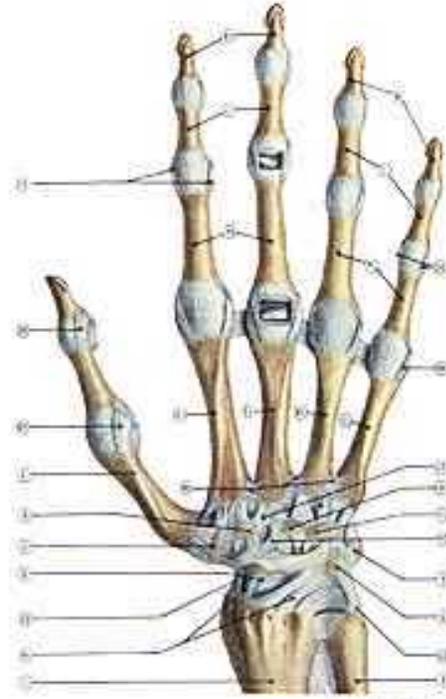

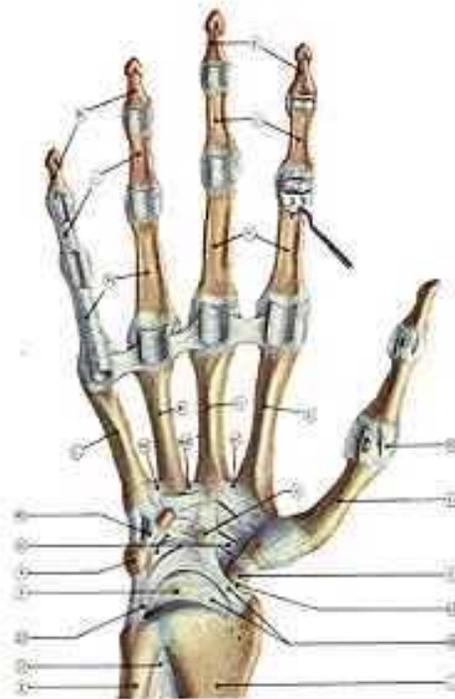

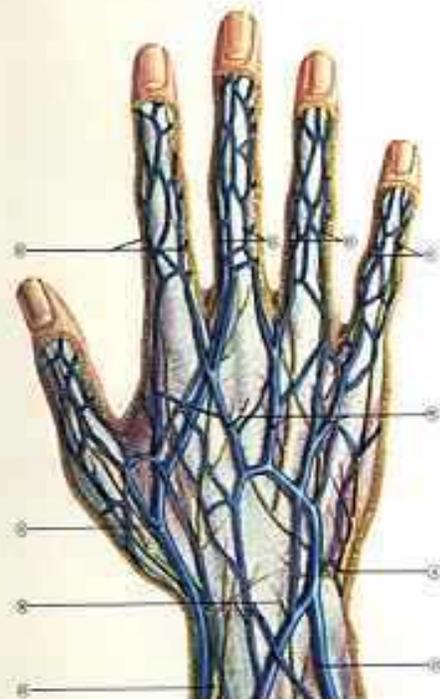

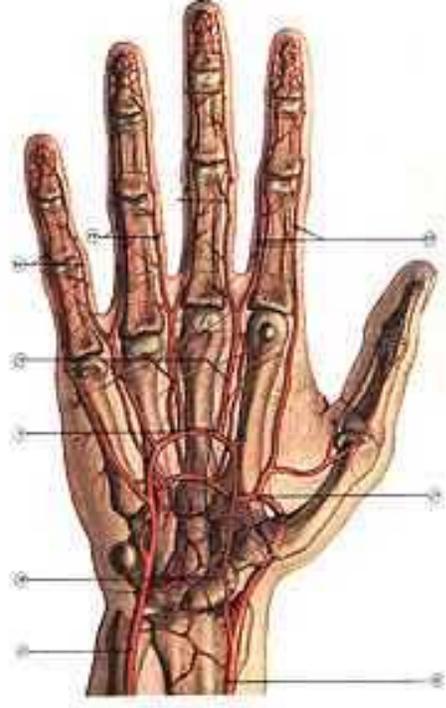

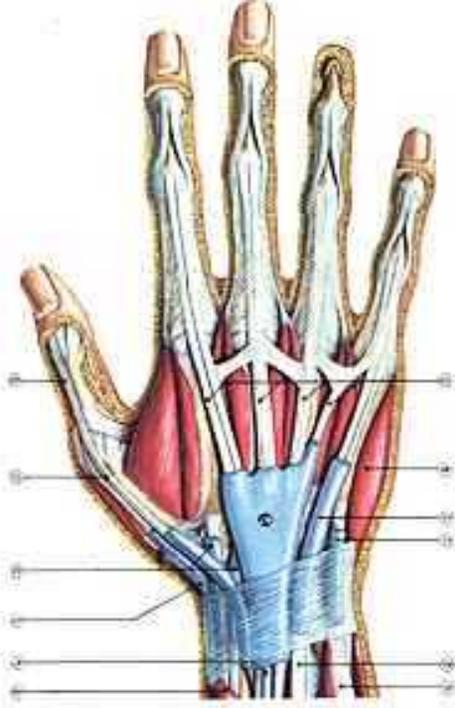

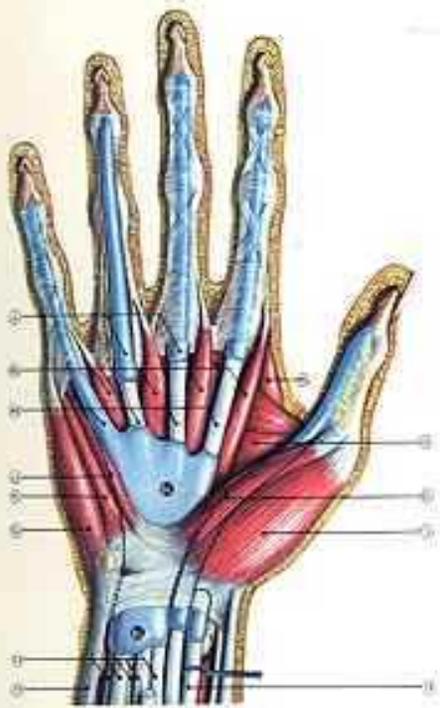

VI. extensor carpi ulnaris
